

DEVENDRA PRATAP SINGH

PRINCIPAL SOFTWARE MANAGER

+91-9424475996 | dps.manit@gmail.com | www.dps.codes

SUMMARY

Principal Engineer and Engineering Manager with 10+ years of experience designing and delivering scalable distributed systems across cloud-native platforms. Proven track record of leading engineering teams, driving architectural decisions, modernizing platforms, and delivering high-impact products from concept to production. Passionate about building reliable systems, improving developer productivity, and mentoring engineers while balancing technical excellence with business outcomes.

TECHNICAL SKILLS

Languages	NodeJS • Python • Golang • Java • PHP
Backend Architecture	Microservices • REST • Distributed Systems • System Design
Cloud & Devops	AWS • GCP • Docker • Kubernetes • CI/CD
Databases	Postgres • MongoDB • Redis
Leadership	Technical Leadership • Engineering Management • Hiring • Mentoring

PROFESSIONAL EXPERIENCE

- Principal Software Manager | Spinny

October 2025 - March 2026

 - Partner with product and business stackholders to translate requirements into scalable technical solutions and execution plans.
 - Led the Python runtime upgrade from 3.6 to 3.10 across services, improving security, maintainability, and performance.
 - Designed and optimized backend workflows and dashboards, reducing operational turnaround time from 4 days to less than 12 hours.
 - Migrated millions of inventory records and redesigned the database schema, optimizing query performance and system reliability.
 - Mentored engineers through design reviews, technical guidance, and architecture discussions.
- Engineering Manager | Fancraze

April 2024 - August 2025

 - Re-architected the NFT platform by making the database the primary source of truth and implementing the asynchronous blockchain synchronization, reducing transaction times from minutes to seconds.
 - Designed and implemented a financial accounting system to provide complete audibility of user transactions, platform revenue, and settlement flows.
 - Managed sprint planning, task prioritization, and technical execution to ensure timely delivery of product milestones.
 - Conducted technical interviews, mentored freshers, supported onboarding and knowledge sharing across the team.
 - Setup quarterly performance review and defined growth plans for engineers.
 - Established engineering standards for code quality, testing and release management.
 - Led the migration of cloud infrastructure from AWS to Google Cloud Platform improving scalability and operational efficiency.
 - Strengthened platform security by implementing centralized secret management using GCP Secret Manager.

Senior Software Engineer | Zynga

September 2018 - June 2023

- Led a team of six outsourced engineers responsible for automation initiatives, task planning, code reviews, and delivery of operation tooling.
- Reduced in-game memory consumption from 40MB to 200kb by redesigning asset loading and data mapping.
- Reduced and optimized the build pipeline execution time from 2 hours to 15 minutes by redesigning the release workflow, parallelizing build tasks, and automation across the entire process.
- Designed and developed a runtime scripting framework enabling feature updates without requiring new game releases.
- Architected the end-to-end automation platform for feature reskin, reducing the manual efforts from 8-10 days to less than a day while ensuring production ready quality and consistency.
- Designed modular feature loading mechanisms that eliminated the legacy code archiving and improved scalability and maintainability.

Software Engineer | Bookmyshow

November 2016 - September 2018

- Designed and developed a centralized IAM platform, providing secure authentication and role-based access across the entire company internal and external applications.
- Architected and built a Universal Access portal that unified access to internal tools through a single interface, improving usability and reducing administrative overhead.
- Built a scalable queue management platform for ticket sales, regulating customer access to the booking flow during high-demand events and improving fairness, reliability and user experience.
- Developed a real-time cinema health monitoring platform, enabling proactive issue detection and improving operational visibility for support team and users.

Associate Software Engineer | Incture Tech

November 2016 - September 2018

- Developed backend services and API's supporting enterprise mobile applications, improving accessibility to SAP business processes.
- Contributed to the design and development of an enterprise integration platform enabling secure data exchange between SAP and non-SAP systems.

EDUCATION

B.Tech | Computer Science and Engineering

July 2011 - May 2015

NIT Bhopal

8.4 CGPA

SIDE PROJECTS

Daemon Hound - CLI

2026

- Built Daemon Hound, an open source CLI for securing local configuration and secret management, featuring encrypted git-backed synchronization and cross machine developer setup.

Default Tamer - MacOS

2026

- Designed and built a SwiftUI macOS default handler router to control link opening behaviour using a rule based engine.

GitPlus - VSCode Extension

2025

- Developed a VS Code extension to streamline git workflows by improving history visibility and commit hygiene and other git related actions.

PingPong HTTP Agent and CLI - NPM Package

2025

- Created a developer friendly HTTP agent and CLI for API creation, testing, supporting collections, request replay, and environment management.
